

Wedding Invitation Platform - Master Instructions

Project Goal

Build a premium wedding invitation platform.

This is NOT a website.

This is NOT a landing page.

This should feel like receiving and opening a real luxury wedding invitation.

Every interaction must create emotion.

The experience should feel elegant, cinematic, premium and realistic.

The design quality should be comparable to Apple, luxury fashion brands and Awwwards websites.

Required Stack

Always use these technologies.

Framework

- Next.js
- React
- TypeScript
- Tailwind CSS

Animation

Use Motion (Framer Motion).

Never use CSS animations when Motion provides a better solution.

Animations must feel physical.

Components

Use shadcn/ui.

Do not create ugly custom buttons or inputs.

Icons

Lucide Icons only.

Typography

Use premium typography.

Maximum 2 font families.

Example:

- Elegant script font for couple names
- Premium serif font for everything else

Never use more than one decorative font.

Styling

Use Tailwind only.

No Bootstrap.

No Material UI.

No random UI libraries.

Design References

Every template will be based on Pinterest references provided by the developer.

Never copy them 1:1.

Instead:

- capture the atmosphere
- capture the composition
- capture the color palette
- capture the luxury feeling

Every template must still be unique.

Core Experience

The invitation must feel like:

Receiving a physical envelope.

Opening the envelope.

Taking out a real paper invitation.

Reading the invitation.

Finishing with emotion.

It should never feel like scrolling a website.

User Flow

Intro

Luxury envelope.

Realistic paper texture.

Soft shadows.

Premium lighting.

Wax seal or elegant closure if suitable.

User clicks.

Envelope opens.

Paper slowly comes out.

At this exact moment:

Background music starts.

Volume fades in over 2–3 seconds.

Paper sound effect plays.

Invitation Paper

The invitation is one long elegant paper.

Not multiple cards.

Not separate sections.

One continuous luxury paper.

The paper is the page.

The user scrolls the paper.

Content Order

1. Couple names
2. Invitation title
3. Elegant invitation message
4. Beautiful photo
5. Emotional paragraph
6. Wedding date
7. Time
8. Venue
9. Countdown
10. Final message
11. "Made with ❤️ by ..."

Nothing more.

No gallery.

No RSVP.

No dress code.

No wishes.

No love story.

No event schedule.

No unnecessary blocks.

Animation Rules

This is the most important part.

Animations should feel cinematic.

Nothing should appear instantly.

Everything fades naturally.

Recommended animations:

- Fade
- Blur → Clear
- Slow Scale
- Translate Y
- Soft Rotation
- Paper Movement
- Depth
- Parallax

Never use:

- Bounce
 - Flash
 - Fast zoom
 - Aggressive easing
 - Cartoon effects
-

Animation Timing

Micro animations

200–400ms

Reveal animations

700–1200ms

Major transitions

1200–1800ms

Never make animations feel rushed.

Scrolling

Scrolling should feel like reading a real letter.

Paper moves smoothly.

Background barely moves.

Subtle parallax only.

No jumpy movement.

Images

Large.

Clean.

High quality.

Rounded only if the design requires it.

Never overdecorate.

Color Palette

Luxury colors only.

Examples:

Ivory

Cream

Warm White

Champagne

Beige

Soft Gold

Muted Green

Dusty Rose

Warm Brown

Never use oversaturated colors.

Lighting

Soft.

Warm.

Natural.

Luxury.

No harsh contrast.

Shadows

Very soft.

Very realistic.

No heavy box shadows.

Corners

Avoid excessive border radius.

Real paper has almost no rounded corners.

Glass Effects

Avoid glassmorphism unless explicitly required.

Wedding invitations should feel like paper.

Audio

Music starts only after opening.

Volume fades in.

Audio should never autoplay before user interaction.

Performance

60 FPS minimum.

Animations must remain smooth on mobile and desktop.

Optimize everything.

Code Quality

Reusable components.

Clean architecture.

Readable code.

No duplicated logic.

No unnecessary dependencies.

Template Philosophy

Every template should tell a different story.

Do not simply change colors.

Change:

- layout
- composition
- typography

- decoration
- atmosphere

Every template should have its own personality while keeping the same premium experience.

Quality Standard

Before considering any template finished, ask yourself:

Would this feel expensive?

Would this impress someone opening it for the first time?

Would this be worthy of a luxury wedding?

If the answer is not a confident "Yes", improve it.
